How to read the addressing shown on each floor plan

DBW5-L02-03-D
DaliGp2

Luminaire — Addressed

A solid ring with a number indicates that the luminaire has been given a short address. The number shown is that address.

DBW5-L02-03-D

Luminaire — Not Addressed

A luminaire filled amber has not been given a short address yet. See the note below.

DBW3-L04-02-A
Oc1

Graphic — Sensor

Marks the position of a sensor. The text beneath gives its module reference and its address, such as **Oc1**.

DBW3-L04-02-A
SW3

Graphic — Switch

Marks the position of a switch. The text beneath gives its module reference and its address, such as **SW3**.

Detailed Text — Module Reference

The upper blue line names the control module that the device is connected to.

DBW5-L02-03-D

→ DaliGp2

Detailed Text — DALI Group

The lower blue line names the DALI group. Luminaires in one group behave as one.

What “Not Addressed” means

There are two reasons, and only two:

1. The luminaire has not been addressed yet. That work is still to come.
2. A snag prevents it from being addressed.

An amber luminaire is not a fault report in itself. Where a snag is the reason, it is recorded in the **project snag report**. Refer to that report for the detail.
